EXPLORE THE WORLD OF CONCRETE HOMES

USA is dedicated to creating beautifully and creatively designed, sustainable, energy efficient, affordable, durable, and safe homes that give many more Americans a shot at homeownership. Inspired by extensive architectural and engineering work, our goal is to provide buildings that are more than houses – our concrete insulated homes are designed to be homes that will last decades with minimal maintenance and make homeownership more affordable. These homes are modern yet timeless.

COMFORT AND COMMUNITY

While not all cottage-style houses are storybook type, they are cozy, inviting, and popular today. Often thought of as a second home or vacation retreat, cottage-style homes make an excellent investment for those buying their first property or those looking to downsize and simplify their lifestyle.

Today, designers and architects are establishing cottage homes that feel spacious and contain most of the features and amenities one expects in modern-style dwellings. Most cottages are one or 1 ½ story structures like the Laurel Cottage with flat roofs, small porches and terraces and expansive array of windows and glass doors that bring the outdoors in along with natural light.
