

## EXPLORE THE WORLD OF CONCRETE HOMES

USA is dedicated to creating beautifully and creatively designed, sustainable, energy efficient, affordable, durable, and safe homes that give many more Americans a shot at homeownership. Inspired by extensive architectural and engineering work, our goal is to provide buildings that are more than houses – our concrete insulated homes are designed to be homes that will last decades with minimal maintenance and make homeownership more affordable. These homes are modern yet timeless.

## COMFORT AND COMMUNITY

This beautiful contemporary home can be built at the beach, in a resort community, on ranch land, and even in a suburb. The floor plan has a center hall plan with living and dining room on opposite sides of the foyer. The Master bedroom and bath are spacious with two additional bedrooms for family and/or guests. The courtyard acts as the home's front entry and has a space for a sweet sitting area to make for a quiet space while reading or meditating.
